PROFESSIONAL SUMMARY

Senior Software Engineer based in Madrid with 10+ years in C#, .NET, ASP.NET Core, Entity Framework Core, SQL Server, and REST APIs. I design, build, and operate high-volume production systems on Azure, with GitLab CI/CD and Azure DevOps. Current UI work is ASP.NET Core Razor Pages and operator tooling. TypeScript, React, and Next.js were the checkout stack at Afya.

At IQVIA I deliver healthcare ingestion and extract platforms on .NET and SQL Server, including REST APIs, Azure Functions, Azure App Service, Azure Blob Storage, Databricks, GitLab CI/CD, and Azure DevOps. Earlier I led backend and partner REST APIs at Fidelis Security on event-driven AWS, rebuilt checkout at Afya with TypeScript, React, and Node.js, migrated a desktop product to SaaS at Levilo, and shipped student payment systems at Senac.

TECHNICAL SKILLS

Languages C#, SQL, T-SQL, TypeScript, Go

Backend .NET, ASP.NET Core, ASP.NET Core Web API, REST APIs, Entity Framework Core, Razor Pages, ASP.NET Core Identity, CQRS, Clean Architecture, Docker, Node.js, GitLab CI/CD, Azure DevOps

Frontend TypeScript, React, Next.js, JavaScript

Cloud & data SQL Server, Azure, Azure SQL, Azure App Service, Azure Functions, Azure Blob Storage, Databricks, SSIS, ETL, MongoDB, AWS, AWS Lambda, AWS SNS, AWS SQS

PROFESSIONAL EXPERIENCE

IQVIA

August 2020 - Present

Senior Software Engineer | Healthcare technology | Pharmaceutical and healthcare data customers

Backend and data platform engineer for high-volume healthcare and pharmaceutical data used across multiple markets.

Stack: C#, .NET, ASP.NET Core Web API, Razor Pages, Entity Framework Core, ASP.NET Core Identity, SQL Server, T-SQL, Clean Architecture, CQRS, REST APIs, Azure App Service, Azure Functions, and CI/CD.

- Optimized a high-volume C#, .NET, Entity Framework Core, and SQL Server file ingestion path that failed under SQL deadlocks, timeouts, and multi-hour runs. Reduced largest-file runtime from 3+ hours or failure to under 20 minutes while ingesting dozens of very large files per hour.
- Built ASP.NET Core REST APIs and Razor Pages operator tooling with ASP.NET Core Identity, CQRS, jQuery, and AdminLTE for production operations on the same estate.
- Designed and implemented a live ETL extract pipeline in Go that replaced SSIS and a manual CSV, Spark, and SQL Server path. Watches FTP, lands Parquet on Azure Blob Storage through Azure Functions, and supports analyst-triggered Databricks loads in minutes.
- Implemented GitLab CI/CD and Azure DevOps pipelines for ASP.NET Core services and SQL Server schema changes, with automated pre-deploy checks so database updates follow the same review path as application code.
- Reduced routine developer production support time by 75% through root-cause analysis and fixes on live ingestion and extract paths.

Fidelis Security

April 2018 - July 2020

Senior Software Engineer | Enterprise security | Enterprise customers on multiple operating systems

Backend engineer on a cross-platform enterprise security product. Work covered OS migration, partner REST API integrations, and event-driven AWS processing with Lambda, SNS, and SQS.

- Led backend development for an OS migration so the product ran reliably across customer environments that previously blocked upgrades, supporting retention and new acquisitions.
- Designed and operated partner REST APIs, then redesigned brittle cybersecurity integrations and reduced recurring production defects in those layers.
- Built Go tooling for simulation, monitoring, and alerts around failing partner connections, plus automated integration tests for those paths.
- Migrated partner and processing workloads that needed async fan-out to AWS Lambda, SNS, and SQS, reducing coupling between partner calls and core processing.

Afya

May 2017 - March 2018

Senior Software Engineer | Healthcare education | Healthcare education checkout and acquisition

Full-stack engineer on the checkout and customer acquisition platform for a major healthcare education company (May 2017 to March 2018). Stack: TypeScript, Next.js, React, Node.js, MongoDB, REST APIs, and AWS.

- Built and operated end-to-end checkout and acquisition flows in TypeScript, Next.js, React, Node.js, MongoDB, and AWS during that period, covering payments, contracts, APIs, and production support.
- Led AWS modernization of the acquisition platform and increased sales conversions by 12% after launch.
- Restructured the backend for more than 80% higher checkout throughput and shipped a zero-downtime cutover for live users.
- Enabled bundle and combo purchases on the acquisition path without breaking existing checkout flows.
- Owned day-to-day production support for checkout and acquisition while delivering feature work on the same codebase.

Levilo

February 2016 - April 2017

Software Engineer | SaaS | Desktop-to-SaaS migration clients

Full-stack and cloud engineer who migrated a desktop product to a SaaS web platform for active clients. Stack: ASP.NET, Razor Pages, jQuery, and AdminLTE on the web path.

- Re-architected a legacy desktop product as SaaS and reduced monthly customer churn from 18% to 3% by removing local stability failures.
- Designed and operated cloud infrastructure for more than 5,000 active client operations, including high-availability integrations with large consumer platforms.
- Delivered the web product on ASP.NET Razor Pages, jQuery, and AdminLTE while keeping existing client operations running during the cutover.

Senac

January 2015 - January 2016

Software Engineer | Education | Students paying invoices and tuition

Full-stack engineer for education payment tools and self-service invoice flows. Stack: ASP.NET Core and ASP.NET Core Identity.

- Launched a multi-method student payment platform end to end with ASP.NET Core Identity.
- Replaced manual invoice and payment support with self-service flows and cut operational load on the support team.

EDUCATION

University of Sao Paulo (USP)

January 2019 - December 2022

Bachelor's degree in Information Systems

Sorocaba College of Engineering (Facens)

January 2014 - December 2018

Computer Engineering
