PROFESSIONAL SUMMARY

Senior Software Engineer in Madrid with 10+ years building and operating production systems in healthcare, education, enterprise security, and SaaS. Primary stack: C# / .NET and SQL Server, with TypeScript and Go where the platform needed it. Authorized to work in Europe.

Work spans backend, data platforms, and cloud infrastructure on systems already serving customers, plus full-stack delivery when the product required it.

CORE TECHNOLOGIES

Languages C#, TypeScript, JavaScript, Go, SQL

Backend .NET • ASP.NET Core • Node.js • REST APIs • GitLab CI/CD

Frontend HTML • CSS • JavaScript • TypeScript • React • Next.js • ASP.NET

Cloud & Data SQL Server • DACPAC • MongoDB • AWS (Lambda, SNS, SQS) • Azure • Azure Blob • Databricks • Parquet

PROFESSIONAL EXPERIENCE

IQVIA

Aug 2020 to Present

Senior Software Engineer • Healthcare technology • Pharmaceutical and healthcare data customers

Backend and data platform engineering in C# / .NET and SQL Server for high-volume healthcare and pharmaceutical data used across multiple markets.

- Stabilized a high-volume C# / .NET and SQL Server file path after SQL deadlocks, timeouts, and 3+ hour or failed runs on the largest files. Every file now finishes within 20 minutes, usually faster, while ingesting dozens of very large files per hour.
- Built a live extract pipeline in Go that replaced SSIS and a manual CSV/Spark/SQL Server path with FTP watch, Parquet, Azure Blob, and analyst-triggered Databricks loads in minutes.
- Introduced GitLab CI/CD and DACPAC versioning with automated pre-deploy checks and schema drift reports, so database changes shipped with the same review path as application code.
- Cut routine developer support time by 75% through RCA-driven production fixes on live ingestion and extract paths.
- Kept production data paths reliable under layout and volume changes without rewriting the surrounding platform.

Fidelis

Apr 2018 to Jul 2020

Senior Software Engineer • Enterprise security • Enterprise customers on multiple operating systems

Backend work on a cross-platform enterprise security product, including OS migration, partner integrations, and AWS async processing.

- Led backend work for an OS migration so the product ran reliably across customer environments that previously blocked upgrades, supporting retention and new acquisitions.
- Repaired brittle cybersecurity partner integrations and cut recurring production defects by redesigning the integration layers.
- Built Go tooling for simulation and alerts around failing partner connections, plus automated integration tests for those paths.
- Moved partner and processing workloads that needed async fan-out onto AWS Lambda, SNS, and SQS, reducing

coupling between partner calls and core processing.

Afya

May 2017 to Mar 2018

Senior Software Engineer • Healthcare education • Checkout and customer acquisition users

Full-stack work on the checkout and customer acquisition platform for a major Brazilian healthcare education company.

- Built and operated end-to-end checkout and acquisition flows in TypeScript, Next.js, React, Node.js, MongoDB, and AWS, including payments, contracts, and production support.
- Led AWS modernization of the acquisition platform, increasing sales conversions by 12% after launch.
- Restructured the backend for more than 80% higher checkout throughput and shipped the cutover without downtime for live users.
- Enabled bundle and combo purchases on the acquisition path, expanding commercial options without breaking existing checkout flows.
- Owned day-to-day production support for checkout and acquisition while shipping feature work on the same codebase.

Levilo

Feb 2016 to Apr 2017

Software Engineer • SaaS • Users migrating from desktop to web

Full-stack and cloud work that moved a desktop product to SaaS for active clients.

- Re-architected a legacy desktop product as SaaS, reducing monthly customer churn from 18% to 3% by removing local stability failures.
- Designed and operated cloud infrastructure for more than 5,000 active client operations, including high-availability integrations with large consumer platforms.
- Delivered the web product path while keeping existing client operations running during the cutover.

Senac

Jan 2015 to Jan 2016

Software Engineer • Education • Students managing invoices and payments

Full-stack delivery of education payment tools and self-service invoice flows.

- Launched a multi-method student payment platform end to end.
- Replaced manual invoice and payment support with self-service flows, cutting operational load on the support team.
- Gave students a direct path to pay and manage invoices without waiting on manual back-office handling.

EDUCATION

University of São Paulo (USP)

Jan 2019 to Dec 2024

Bachelor of Information Systems

Sorocaba College of Engineering (Facens)

Jan 2014 to Dec 2018

Computer Engineering studies

LANGUAGES

English, Portuguese, Spanish
