PROFESSIONAL SUMMARY

Senior Software Engineer with more than ten years of backend experience in C#, .NET, ASP.NET Core, SQL Server, and Azure. I design, build, and operate production systems for healthcare data, enterprise security, education, and SaaS.

At IQVIA I own high-volume healthcare extract and ingestion paths on .NET and SQL Server, including a live Go pipeline on Azure Blob, Azure Functions, and Databricks that replaced a brittle SSIS and CSV flow. Earlier I led backend work on a cross-platform security product at Fidelis Security, rebuilt checkout and acquisition at Afya with TypeScript and React, moved a desktop product to SaaS at Levilo, and shipped student payment tools at Senac. I stay backend-first and take frontend and CI/CD when the product needs one owner across the stack.

TECHNICAL SKILLS

Languages C#, SQL, TypeScript, JavaScript, Go

Backend .NET, ASP.NET Core, Razor Pages, Entity Framework Core, ASP.NET Core Identity, CQRS, REST APIs, Node.js, GitLab CI/CD, Azure DevOps

Frontend TypeScript, React, Next.js, JavaScript, HTML, CSS, jQuery, Bootstrap / AdminLTE, ASP.NET

Cloud & data SQL Server, DACPAC, AWS Lambda, AWS SNS, AWS SQS, Azure, Azure SQL, Azure App Service, Azure Functions, Azure Blob, MongoDB, Databricks, Parquet

PROFESSIONAL EXPERIENCE

IQVIA

Aug 2020 to Present

Senior Software Engineer | Healthcare technology | Pharmaceutical and healthcare data customers

Backend and data platform engineering for high-volume healthcare and pharmaceutical data used across multiple markets. Main stack: C#, .NET, ASP.NET Core, Razor Pages, Entity Framework Core, ASP.NET Core Identity, SQL Server, Clean Architecture, and CQRS.

- Stabilized a high-volume C#, .NET, Entity Framework Core, and SQL Server file ingestion path that failed under SQL deadlocks, timeouts, and multi-hour runs on the largest files. Every file now finishes within 20 minutes, usually faster, while the path ingests dozens of very large files per hour.
- Built a live extract pipeline in Go that replaced SSIS and a manual CSV, Spark, and SQL Server path. The new flow watches FTP, lands Parquet on Azure Blob through Azure Functions, and lets analysts trigger Databricks loads in minutes.
- Delivered ASP.NET Core Razor Pages operator tooling with ASP.NET Core Identity, CQRS, REST-oriented workflows, jQuery, and AdminLTE on the same estate.
- Introduced GitLab CI/CD, Azure DevOps, and DACPAC versioning with automated pre-deploy checks and schema drift reports so database changes ship with the same review path as application code.
- Cut routine developer support time by 75% through root-cause production fixes on live ingestion and extract paths.

Fidelis Security

Apr 2018 to Jul 2020

Senior Software Engineer | Enterprise security | Enterprise customers on multiple operating systems

Backend engineering on a cross-platform enterprise security product, including OS migration work, partner API integrations, and AWS asynchronous processing with Lambda, SNS, and SQS.

- Led backend work for an OS migration so the product ran reliably across customer environments that previously

blocked upgrades, supporting retention and new acquisitions.

- Repaired brittle cybersecurity partner integrations and cut recurring production defects by redesigning the integration layers.
- Built Go tooling for simulation and alerts around failing partner connections, plus automated integration tests for those paths.
- Moved partner and processing workloads that needed async fan-out onto AWS Lambda, SNS, and SQS, reducing coupling between partner calls and core processing.

Afya

May 2017 to Mar 2018

Senior Software Engineer | Healthcare education | Checkout and customer acquisition users

Full-stack engineering on the checkout and customer acquisition platform for a major healthcare education company using TypeScript, Next.js, React, Node.js, MongoDB, and AWS.

- Built and operated end-to-end checkout and acquisition flows in TypeScript, Next.js, React, Node.js, MongoDB, and AWS, covering payments, contracts, and production support.
- Led AWS modernization of the acquisition platform. Sales conversions rose 12% after launch.
- Restructured the backend for more than 80% higher checkout throughput and shipped the cutover without downtime for live users.
- Enabled bundle and combo purchases on the acquisition path without breaking existing checkout flows.
- Owned day-to-day production support for checkout and acquisition while shipping feature work on the same codebase.

Levilo

Feb 2016 to Apr 2017

Software Engineer | SaaS | Users migrating from desktop to web

Full-stack and cloud engineering that moved a desktop product to a SaaS web platform for active clients.

- Re-architected a legacy desktop product as SaaS. Monthly customer churn fell from 18% to 3% after local stability failures were removed.
- Designed and operated cloud infrastructure for more than 5,000 active client operations, including high-availability integrations with large consumer platforms.
- Delivered the web product path while keeping existing client operations running during the cutover.

Senac

Jan 2015 to Jan 2016

Software Engineer | Education | Students managing invoices and payments

Full-stack delivery of education payment tools and self-service invoice flows.

- Launched a multi-method student payment platform end to end.
- Replaced manual invoice and payment support with self-service flows, cutting operational load on the support team.
- Gave students a direct path to pay and manage invoices without waiting on manual back-office handling.

EDUCATION

University of São Paulo (USP)

Jan 2019 to Dec 2022

Bachelor of Information Systems

Sorocaba College of Engineering (Facens)

Jan 2014 to Dec 2018

Computer Engineering
