PROFESSIONAL SUMMARY

Senior Software Engineer and backend engineer based in Madrid with 10+ years in C#, .NET, ASP.NET Core, Entity Framework Core, SQL Server, T-SQL, REST APIs, and Azure. I design, build, and operate high-volume production systems and data platforms in healthcare, enterprise security, education, and SaaS.

At IQVIA I own healthcare extract and ingestion pipelines on .NET and SQL Server, including performance tuning, Azure Functions, Azure Blob, Databricks, CI/CD, and Azure DevOps. Earlier I led backend and API integration work at Fidelis Security on AWS Lambda, SNS, and SQS, rebuilt checkout and acquisition at Afya with TypeScript, React, Node.js, and MongoDB, migrated a desktop product to SaaS at Levilo, and shipped student payment systems at Senac. I stay backend-first and take frontend and DevOps when the product needs one owner across the stack.

TECHNICAL SKILLS

Languages C#, SQL, T-SQL, TypeScript, JavaScript, Go

Backend .NET, ASP.NET Core, ASP.NET, REST APIs, Web APIs, Razor Pages, Entity Framework Core, Entity Framework, ASP.NET Core Identity, CQRS, Clean Architecture, Node.js, GitLab CI/CD, Azure DevOps, CI/CD

Frontend TypeScript, React, Next.js, JavaScript, HTML, CSS, jQuery, Bootstrap, AdminLTE

Cloud & data SQL Server, Azure, Azure SQL, Azure App Service, Azure Functions, Azure Blob Storage, DACPAC, SSIS, ETL, Databricks, Parquet, MongoDB, AWS, AWS Lambda, AWS SNS, AWS SQS

PROFESSIONAL EXPERIENCE

IQVIA

August 2020 - Present

Senior Software Engineer | Healthcare technology | Pharmaceutical and healthcare data customers

Backend engineer and data platform engineer for high-volume healthcare and pharmaceutical data used across multiple markets. Stack: C#, .NET, ASP.NET Core, Razor Pages, Entity Framework Core, ASP.NET Core Identity, SQL Server, T-SQL, Clean Architecture, CQRS, REST APIs, Azure, and CI/CD.

- Optimized a high-volume C#, .NET, Entity Framework Core, and SQL Server file ingestion path that failed under SQL deadlocks, timeouts, and multi-hour runs. Reduced largest-file runtime from 3+ hours or failure to under 20 minutes while ingesting dozens of very large files per hour.
- Designed and implemented a live ETL extract pipeline in Go that replaced SSIS and a manual CSV, Spark, and SQL Server path. Watches FTP, lands Parquet on Azure Blob Storage through Azure Functions, and supports analyst-triggered Databricks loads in minutes.
- Built ASP.NET Core Razor Pages operator tooling with ASP.NET Core Identity, CQRS, REST-oriented workflows, jQuery, and AdminLTE for production operations on the same estate.
- Implemented GitLab CI/CD, Azure DevOps pipelines, and DACPAC database versioning with automated pre-deploy checks and schema drift reports so SQL Server changes ship with the same review path as application code.
- Reduced routine developer production support time by 75% through root-cause analysis and fixes on live ingestion and extract paths.

Fidelis Security

April 2018 - July 2020

Senior Software Engineer | Enterprise security | Enterprise customers on multiple operating systems

Backend engineer on a cross-platform enterprise security product. Work covered OS migration, partner REST API integrations, and event-driven AWS processing with Lambda, SNS, and SQS.

- Led backend development for an OS migration so the product ran reliably across customer environments that previously blocked upgrades, supporting retention and new acquisitions.
- Redesigned brittle cybersecurity partner API integrations and reduced recurring production defects in those integration layers.
- Built Go tooling for simulation, monitoring, and alerts around failing partner connections, plus automated integration tests for those paths.
- Migrated partner and processing workloads that needed async fan-out to AWS Lambda, SNS, and SQS, reducing coupling between partner calls and core processing.

Afya

May 2017 - March 2018

Senior Software Engineer | Healthcare education | Checkout and customer acquisition users

Full-stack engineer on the checkout and customer acquisition platform for a major healthcare education company. Stack: TypeScript, Next.js, React, Node.js, MongoDB, REST APIs, and AWS.

- Built and operated end-to-end checkout and acquisition flows in TypeScript, Next.js, React, Node.js, MongoDB, and AWS, covering payments, contracts, APIs, and production support.
- Led AWS modernization of the acquisition platform and increased sales conversions by 12% after launch.
- Restructured the backend for more than 80% higher checkout throughput and shipped a zero-downtime cutover for live users.
- Enabled bundle and combo purchases on the acquisition path without breaking existing checkout flows.
- Owned day-to-day production support for checkout and acquisition while delivering feature work on the same codebase.

Levilo

February 2016 - April 2017

Software Engineer | SaaS | Users migrating from desktop to web

Full-stack and cloud engineer who migrated a desktop product to a SaaS web platform for active clients.

- Re-architected a legacy desktop product as SaaS and reduced monthly customer churn from 18% to 3% by removing local stability failures.
- Designed and operated cloud infrastructure for more than 5,000 active client operations, including high-availability integrations with large consumer platforms.
- Delivered the web product path while keeping existing client operations running during the cutover.

Senac

January 2015 - January 2016

Software Engineer | Education | Students managing invoices and payments

Full-stack engineer for education payment tools and self-service invoice flows.

- Launched a multi-method student payment platform end to end.
- Replaced manual invoice and payment support with self-service flows and cut operational load on the support team.
- Gave students a direct path to pay and manage invoices without waiting on manual back-office handling.

EDUCATION

University of Sao Paulo (USP)

January 2019 - December 2022

Bachelor's degree in Information Systems

Sorocaba College of Engineering (Facens)

January 2014 - December 2018

Computer Engineering
