PROFESSIONAL SUMMARY

Senior .NET backend engineer based in Madrid, with 10+ years building and modernizing data-heavy platforms across healthcare, education, enterprise security and SaaS.

I take ownership of architecture and delivery on existing systems: processing time, schema change safety, operational cost, and whether the platform can keep shipping without breaking production.

Open to senior backend roles and consulting on .NET modernization.

SELECTED ACHIEVEMENTS

- Reduced complex healthcare data processing time by more than 90% (several hours to a few minutes) while absorbing multi-terabyte daily peaks.
- Cut recurring infrastructure overhead by retiring a large legacy processing fleet after redesigned ASP.NET Core and SQL Server pipelines proved stable.
- Established GitLab CI/CD and DACPAC database versioning with automated drift detection, eliminating production schema mismatches.
- Increased Afya checkout sales conversions by 12% and throughput capacity by more than 80%.
- Reduced Levilo monthly customer churn from 18% to 3% while scaling to 5,000+ active client operations.

CORE TECHNOLOGIES

Languages: C#, SQL, TypeScript

Backend: .NET | ASP.NET Core | REST APIs

Cloud & Data: SQL Server | DACPAC | AWS (Lambda, SNS, SQS) | Docker | GitLab CI/CD

Focus: System modernization | Data pipelines | Production reliability

PROFESSIONAL EXPERIENCE

IQVIA | Senior Software Engineer

Aug 2020 to Present | Healthcare technology | Pharmaceutical and healthcare data customers

Design and deliver backend platforms that process large volumes of healthcare and

pharmaceutical data for customers across multiple markets.

- Redesigned ASP.NET Core and SQL Server pipelines, reducing complex healthcare data processing time by more than 90% (several hours to a few minutes) and cutting timeout errors.
- Scaled ingestion to multi-terabyte daily peaks from healthcare and pharmaceutical sources.
- Cut recurring infrastructure overhead by decommissioning a large legacy processing fleet after the redesigned pipelines proved stable.
- Built GitLab CI/CD from scratch with test coverage tracking, and introduced DACPAC so database changes were versioned with automated pre-deploy and drift reports.
- Reduced routine developer support time by 75% (about 8 hours to 2 hours per developer monthly) through RCA-driven permanent production fixes.

Fidelis | Senior Software Engineer

Apr 2018 to Jul 2020 | Enterprise security | Enterprise customers on multiple operating systems

Backend work on modernizing a cross-platform enterprise security product and stabilizing partner integrations.

- Owned backend work on a product migration that improved operating-system compatibility and supported customer retention.
- Built automated integration testing that stabilized connections with cybersecurity partners.
- Reduced recurring production defects by redesigning integration layers.
- Moved event-driven workloads onto AWS (Lambda, SNS, SQS) to support cloud processing.

Afya | Senior Software Engineer

May 2017 to Mar 2018 | Healthcare education | Checkout and customer acquisition users
Technical lead for modernizing the checkout and customer acquisition platform for a major Brazilian healthcare education company.

- Led AWS-based modernization of the acquisition platform, increasing sales conversions by 12% after launch.
- Restructured the backend for more than 80% higher throughput with a zero-downtime checkout rollout.

Levilo | Software Engineer

Feb 2016 to Apr 2017 | SaaS | Users migrating from desktop to web

Helped turn a desktop application into a SaaS product and support cloud operations for active clients across Brazil.

- Re-architected a legacy desktop product as SaaS, reducing monthly customer churn from 18% to 3% by removing local stability failures.
- Designed and scaled cloud infrastructure for more than 5,000 active client operations, including high-availability integrations with large consumer platforms.

Senac | Software Engineer

Jan 2015 to Jan 2016 | Education | Students managing invoices and payments

Built education tools focused on payment flows and self-service for invoices.

- Launched a multi-method payment platform for students.
- Replaced manual support workflows with self-service for invoices and payments.

EDUCATION

University of São Paulo (USP)

Bachelor of Information Systems
Jan 2019 to Dec 2024

Sorocaba College of Engineering (Facens)

Computer Engineering studies
Jan 2014 to Dec 2018

LANGUAGES

Portuguese: Native | English: C2 | Spanish: Intermediate
